FOREX STRATEGIES BY ANDREA UNGER

4-time winner of the prestigious World Cup Trading Championships®

Axiory is proud to present you with the unique opportunity to invest in forex strategies created especially for our clients by Mr. Andrea Unger - professional trader, educator and risk manager.

ABOUT ANDREA UNGER

Andrea Unger has been a full-time trader since 2001. He has a background in mechanical engineering which fuels his passion for numbers. This together with his analytical view of the financial markets were the reasons he started trading and developing his own automatic strategies. After he develops, tests and finalizes his strategies on a real account, Andrea continues to monitor and correct all of his strategies daily.

The main difference between Andrea's impressive results and other traders, is his deep knowledge and understanding in the use of position sizing. He develops strategies with expected rewards and predictable risks that utilize his risk management experience. Andrea is a respected authority in this field and author of a book on money management that describes position sizing in great detail.

COOPERATION WITH AXIORY

"I've chosen Axiory to be my partner because I like their vision and how they think about their clients. Client satisfaction and profitability is their utmost concern, and that is what I like about this cooperation."

Mr. Unger has created two new strategies for Axiory clients that focus on long term profitability from both the average risk and conservative risk approach.

ANDREA'S COMPETITIVE STRATEGIES

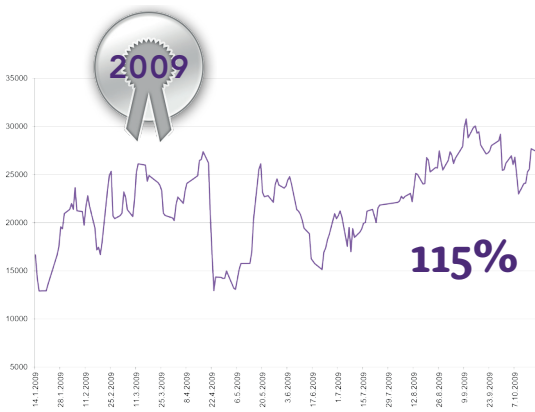

Real audited account results from The World Cup Trading Championships®

Andrea Unger is the only trader to have won The WCTC® title three times in a row (2008-2010). He also placed first in the Q4 of 2012. Presented here are his net returns from the competition.

These results prove that Andrea's concept of trading and risk management rules can be very successful. However, these strategies with their substantial profits aren't practical outside competition trading, as they also risk great losses as well.

Knowing this, Andrea developed two new conservative and average risk strategies for investors. Although less profitable yearly, more importantly, these strategies are a lot less risky.

Andrea's thoughts on strategy risk management:

"Only when I'm satisfied with the worst possible scenario of losses, do I start to care about the profits."

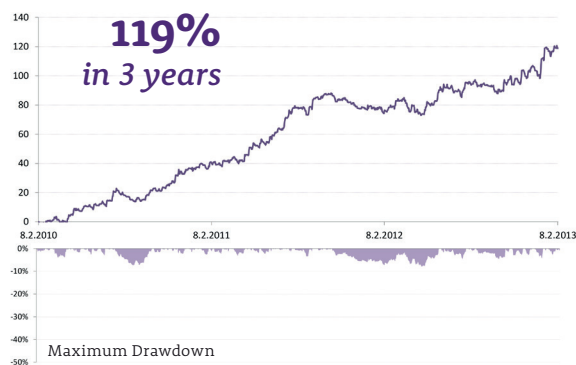

ANDREA'S NEW STRATEGIES FOR INVESTORS

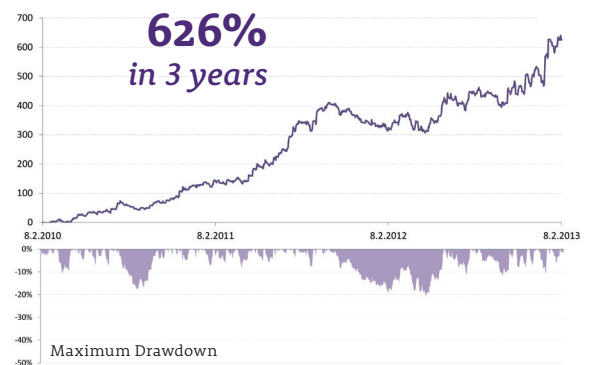

Designed especially for Axiory clients

Right now you have the opportunity to follow one or both strategies from the trading champion himself. Easily connect to them through our MultiTrader investment platform which is integrated with our user-friendly client zone MyAxiory.

UngerTrading SOFTPATH

UngerTrading ACHIEVER

Backtested time period: 8.2.2010 to 8.2.2013.

Profits are reinvested. Drawdown is calculated after each closed trade as the ratio of the balance level in relation to the previous balance level.

These strategies are brand-new and tailor-made to our investors' needs, and since they are so new, the data presented below comes from backtesting. Backtesting is a representation of how the strategy would have worked under past relevant conditions.

STRATEGIES DETAILS

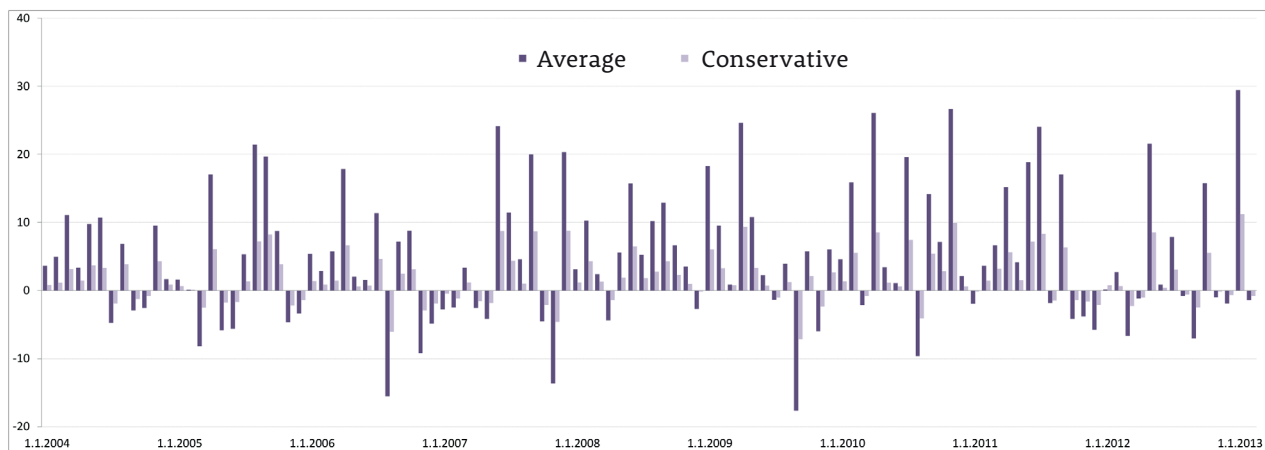

UngerTrading SOFTPATH

Risk type:	Conservative
Min. Deposit:	10 000 USD
Testing period:	6. 1. 2004 - 8. 2. 2013
Average yearly profit:	21,7 %
Max. Drawdown:	-11,9 %
CapitalGuard level:	-20%
Profit fee:	35%

UngerTrading ACHIEVER

Risk type:	Average
Min. Deposit:	10 000 USD
Testing period:	6. 1. 2004 - 8. 2. 2013
Average yearly profit:	67,5 %
Max. Drawdown:	-28,1 %
CapitalGuard level:	-35%
Profit fee:	35%

Monthly profits comparison of the two strategies in percentages.

Backtested time period: 6. 1. 2004 - 8. 2. 2013.

All profits are reinvested each month. Profits are calculated as the monthly total in ratio to the balance at the beginning of the month.

STRATEGIES DESCRIPTIONS

UngerTrading SOFTPATH

UngerTrading SOFTPATH is a trend following strategy which comprises of 6 different automatic systems; therefore, its actions are based on different principles. The portfolio looks for a proper mix of trend and reversal signals. In order to achieve this the systems look for completely different setups, nevertheless trades are normally taken on breakout of important levels and left open for some hours up to some days. Various trigger levels are determined either on price pattern base or on volatility base, calculations are made on 5 Minutes bars for 2 of the systems, on 1 Hour bars on one and on 15 Minutes bar on the remaining 3 systems.

The strategy's performance is continually monitored, tested and updated by Mr. Unger when necessary.

At the moment, the only traded pair is EURUSD, as each position opened is sized depending on the current volatility of the markets to keep equity movements within predetermined limits. This is set by an automatic percent volatility model that configures higher volatility with lower position size and conversely; for example, in calm markets the trade size can increase up to 0.2 lots per 10,000 USD of the client's capital per position, while in more volatile conditions the exposure may be lowered to 0.01 lots.

Each system normally opens only a single position at one time, yet other positions may open depending on the entries from the other systems in the whole portfolio; this results in 2 positions on average. The daily average is from 1 to 2 new open trades.

UngerTrading SoftPath uses different kinds of exits - fixed pip stop losses, time exits and trailing exits. The maximum drawdown in closed positions is set to 8%. If such a drawdown is ever reached, the system will stop until the strategy is reconfigured for optimal conditions.

CapitalGuard level is set to -20% for this strategy.

UngerTrading ACHIEVER

This strategy has the same system and principles as the UngerTrading SOFTPATH strategy; however, there are three main differences. In calm markets the trade size can increase up to 0.3 lots per 10,000 USD of the client's capital per position, while in more volatile conditions the exposure may be lowered to 0.05 lots; the maximum drawdown in closed positions is set to 30%; and the CapitalGuard level of this strategy is set by MultiTrader to -35%.

CONNECTING TO ANDREA'S STRATEGIES

To connect, you will need to open a live account at Axiory; it's a simple process that takes just a few minutes. Next, connect to Andrea's strategy through our MultiTrader investment platform. Finally, deposit the necessary funding for connection to the strategy into your Axiory account to begin.

PROFIT FEE

Strategy providers like Andrea are paid for their trading expertise in Profit Fees. This means the profit gained on your account is shared with them. If there is no profit, then there is no reason to compensate the provider. This is their incentive to trade successfully. No other fees are required for investment.

CAPITALGUARD

The MultiTrader platform uses a safety feature called CapitalGuard for protecting client capital. This feature prevents a strategy's equity from dropping below a predetermined level defined by its risk type. If this happens, MultiTrader will close the strategy's positions and deactivate the provider's signal to prevent further loss. More details about CapitalGuard can be found in the MultiTrader Guide.

FUND SECURITY

At Axiory you have your own account that receives signals from strategies. Nobody else but you has access to your account, and you can stop trading or withdraw your money at any time. All funds and fund transactions are secure because we are a fully regulated brokerage with the IFSC.
